After “Arming” the application, this window will show. It may take a few seconds for your phone to recognize its location, but once locating is complete, it will show you as a dot on a map. The red outline on the map shows where you will be considered on or off campus. At this time, no alert has been sent.

If you need emergency assistance, press the “Help” button to continue.
After clicking the “Help” button, the screens will move through 2 more dialogue boxes. The first will ask what type of emergency you have (police, fire or medical) and the second one will ask how you would like to alert the police. These boxes will automatically proceed forward, even if the user does not press anything.

Remember, if you are not on the Foggy Bottom or Mount Vernon Campuses, you are considered “off-campus” and will be prompted to dial 911 immediately.

We recommend that users enter as much information as possible in the user profile before sending any alerts, including name, current residence and emergency contact. This will help our dispatchers get you the emergency assistance that you need.

To submit a tip, simply select the “lightbulb” icon on the home page and fill out each field as best as you can. Here you have the option to include your name, phone number, GPS location and photo/video evidence.

Revised: 8/20/14      For assistance, please contact GWIT at 202-994-GWIT or ithelp@gwu.edu
